

IRDPRINT VIEW AND REPRINT

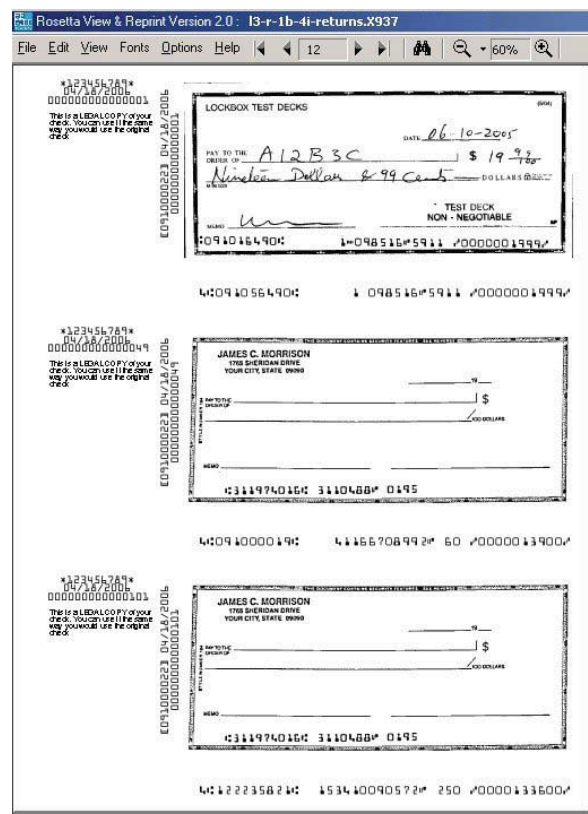

Rosetta Technologies' IRDPrint View and Reprint software enables authorized users to retrieve and view X9.37 print files, previously printed cash letters, bundles, and items.

Rosetta Technologies IRDPrint™ View & Reprint is a secure software solution that allows X9.37 files to be selected and submitted for reprinting while maintaining the security and integrity that is inherent in all Rosetta IRD printing applications.

IRDPrint View & Reprint features include:

- Retrieves ANS 9.100-140 compliant printable data files
- Search printed files for cash letters, bundles, or items
- Allows re-submission for reprinting by authorized personnel such as supervisors, operations management, or operations administrators
- Stringent security restricts access to 'view' and 'view and reprint' capability
- Tightly coupled with Rosetta Technologies' IRDPrint software products including IRDPrint Director, IRDPrint Advanced Returns and IRDPrint Remote Capture.

IRDPrint View and Reprint is compatible with the entire line of Rosetta Technologies' MICR printers that accept HP PCL 5. The output from these printers meets Rosetta Technologies' stringent performance and quality requirements and exceeds ANSI X9.100-140-2004 image quality.

OPERATING SYSTEM REQUIREMENTS

Operating System:

Windows XP/7 & Windows Server 2003 R2/ 2008 R2

CPU:

Pentium or higher processor running at 1 GHz or better

Connectivity:

Ethernet connection 10 Mb per second or better

Memory:

256 MB of memory

Hard Drive:

50 MB of available space for core software

Additional Hard Drive:

256 KB per Image Replacement Document (IRD)
